

Abstract

The major aim of present research investigation is a study of the indicators enhancing and improving Social Status of Old Urban Textures. As per what has been discussed and with the objective of heightening the identity level, supervision and security in the process of reconstruction, it can be concluded that reconstruction enhances the security because of the shortage of environmental threats and sharing to reconstruct buildings causes the promotion of social supervision indicators in community, as well as, to heighten the level of identity in society, the level of residents' social interactions should be increased by predicting alternative environment (social environments). Such environments could increase functional mixture in social interaction and the level of security.
